Foxit PDF SDK 7.3 Upgrade Warnings

This document contains a list of items that developers looking to upgrade to Foxit PDF SDK 7.3 from previous version should pay attention to. Changes to code may be required in order for your projects to compile using the new version.

Upgrading to version 7.3 from version 7.2

There are some minor upgrade warnings in this release when moving from version 7.2 to version 7.3:

- The parameter of constructor function of **Font** has been changes, which deletes the default value for "weight".

  SDK 7.2: **Font**(const wchar_t* name, uint32 styles, Charset charset, int **weight = 0**);
  SDK 7.3: **Font**(const wchar_t* name, uint32 styles, Charset charset, int **weight**);

- The enumeration **foxit::pdf::graphics::ImageObject::ColorSpace** has been changed to **foxit::common::ColorSpaceType**.

- The enumeration foxit::pdf::interform::Field::Flags::**e_FlagChoiseMultiSelect** has been changed to foxit::pdf::interform::Field::Type::**e_FlagChoiceMultiSelect**.

- The TrustedCertStoreCallback class adds a new callback function (**virtual bool IsCertTrustedRoot(const String& cert) = 0**).

Upgrading to version 7.2 from version 7.1

There is only one minor upgrade warning in this release when moving from version 7.1 to version 7.2. In this release we worked hard to ensure that no modifications to existing code bases would be required when upgrading.

The parameter type of the function **foxit::addon::optimization::ImageSettings::SetQuality** has been changed as below:

SDK 7.1:

void foxit::addon::optimization::ImageSettings::SetQuality (**int32** quality)

SDK 7.2:

void foxit::addon::optimization::ImageSettings::SetQuality (**ImageCompressQuality** quality)

Upgrading to version 7.1 from version 7.0

If you are upgrading from version 7.0 to version 7.1, please take note of the changes that occurred between version 7.0 and version 7.1.

- From 7.1 version, the whole **foxit::addon::ConnectedPDF** class has been removed.

- Some APIs have been changed in version 7.1. Note that the APIs related to ConnectedPDF in the PDFDoc class have also been removed. The following table lists the APIs mapping between version 7.0 and 7.1.

SDK 7.0	SDK 7.1
Charset foxit::common::Font::**GetCharset**(const pdf::PDFDoc & document)	**CIDCharset** foxit::common::Font::**GetCIDCharset**(const pdf::PDFDoc & document)
void foxit::pdf::annots::Line::SetMeasureUnit(**int** measure_type, const String & unit)	void foxit::pdf::annots::Line::SetMeasureUnit(**MeasureType** measure_type, const String & unit)
String foxit::pdf::annots::Line::GetMeasureUnit(**int** measure_type)	String foxit::pdf::annots::Line::GetMeasureUnit(**MeasureType** measure_type)
void foxit::pdf::annots::Line::SetMeasureConversionFactor(**int** measure_type, float factor)	void foxit::pdf::annots::Line::SetMeasureConversionFactor(**MeasureType** measure_type, float factor)
float foxit::pdf::annots::Line::GetMeasureConversionFactor(**int** measure_type)	float foxit::pdf::annots::Line::GetMeasureConversionFactor(**MeasureType** measure_type)
bool foxit::pdf::PDFDoc::IsCPDF() const	Removed
bool foxit::pdf::PDFDoc::IsCDRM() const	Removed
String foxit::pdf::PDFDoc::GetDocURI()	Removed
String foxit::pdf::PDFDoc::GetEndpoint()	Removed

Upgrading to version 7.0 from version 6.4

There are two minor upgrade warnings in this release when moving from version 6.4 to version 7.0:

- The value of enumeration **foxit::pdf::Signature::e_StateUnknown** has been changed from 0 to 0x80000000.

- The functions **foxit::pdf::Signature::StartVerify** and **foxit::pdf::SignatureCallback::VerifySigState** are only used to verify the integrity of a signature instead of the validity of a signature, so that the return value of **VerifySigState** in the default signature callback has been changed from "VALID/INVALID" to "NOCHANGE/CHANGE".

Upgrading to version 6.4 from version 6.3

There are some minor upgrade warnings in this release when moving from version 6.3 to version 6.4.

- The functions that contain the parameter "**ifstream**" have been deprecated.

- The function **foxit::common::Renderer::SetTransformAnnotIcon** has been deprecated.

- The parameter "**is_transform_icon**" of the function **foxit::pdf::annots::Annot::GetDeviceRect** has been deprecated.

Upgrading to version 6.3 from version 6.2.1

There is only one minor upgrade warning in this release when moving from version 6.2.1 to version 6.3. In this release we worked hard to ensure that no modifications to existing code bases would be required when upgrading.

The function name of **foxit::pdf::interform::Field::SetDefualtValue** has been changed to **foxit::pdf::interform::Field::SetDefaultValue**.

Upgrading to version 6.2.1 from version 6.2

There is only one upgrade warning in this release when moving from version 6.2 to version 6.2.1. In this release we worked hard to ensure that no modifications to existing code bases would be required when upgrading.

Add a callback interface **WidgetEvent** in **foxit::addon::xfa::DocProviderCallback** class to execute xfa widget event when you create or destroy xfa widget.

Upgrading to version 6.2 from version 6.1.1

There is only one upgrade warning in this release when moving from version 6.1.1 to version 6.2. In this release we worked hard to ensure that no modifications to existing code bases would be required when upgrading.

The return type of foxit::addon::xfa::XFADoc::**ExportData** has been changed from **void** to **bool**.

Upgrading to version 6.1.1 from version 6.1

If you are upgrading from version 6.1 to version 6.1.1, please take note of the changes that occurred between version 6.1 and version 6.1.1.

For the version 6.1.1 release of Foxit PDF SDK, there are two minor changes:

- Add a new class "foxit::common::file::StreamCallback", and change the parameter in the **SaveAs** function from
  "bool Image::SaveAs(file::**WriterCallback*** file, const wchar_t* file_extension) EXCE_SPEC" to
  "bool Image::SaveAs(file::**StreamCallback*** file, const wchar_t* file_extension) EXCE_SPEC".

- Change the enum definitions of watermark position from "**enum foxit::pdf::WatermarkSettings::Position**" to "**enum foxit::common::Position**".

If you use any of these functions in your code then you may need to update your code to reflect the change when moving to version 6.1.1.

Upgrading to version 6.1 from version 6.0

There are no upgrade warnings when moving from version 6.0 to version 6.1. In this release we worked hard to ensure that no modifications to existing code bases would be required when upgrading.

Upgrading to version 6.0 from version 5.3

Foxit PDF SDK 6.0 is a major new version of Foxit PDF SDK and contains a lot of changes to the APIs. In version 6.0, the APIs have been substantially changed, which are provided from C programming language to C++ programming language. Please take note of the changes that occurred between version 5.3 and version 6.0 if you are upgrading from version 5.3 to version 6.0.
